FreshCoins Team will take no payment for manipulating the results of this audit.

The score and the result will stay on this project page information on our website <https://freshcoins.io>

FreshCoins Team does not guarantees that a project will not sell off team supply, or any other scam strategy (RUG or Honeypot etc)

INTRODUCTION

FreshCoins (Consultant) was contracted by **JamFi** (Customer) to conduct a Smart Contract Code Review and Security Analysis.

0xF02f86EE4a5926A1A0387145D051d26e24be323C

Network: **Ethereum (ETH)**

This report presents the findings of the security assessment of Customer's smart contract and its code review conducted on **23/10/2025**

AUDIT OVERVIEW

Security Score

Static Scan

Automatic scanning for common vulnerabilities

ERC Scan

Automatic checks for ERC's conformance

High

Medium

Low

Optimizations

Informational

No.	Issue description	Checking Status
1	Compiler Errors / Warnings	Passed
2	Reentrancy and Cross-function	Good
3	Front running	Passed
4	Timestamp dependence	Passed
5	Integer Overflow and Underflow	Passed
6	Reverted DoS	Passed
7	DoS with block gas limit	Passed
8	Methods execution permissions	Passed
9	Exchange rate impact	Passed
10	Malicious Event	Passed
11	Scoping and Declarations	Passed
12	Uninitialized storage pointers	Passed
13	Design Logic	Passed
14	Safe Zeppelin module	Passed

OWNER PRIVILEGES & FINDINGS

● Redundant SafeMath Usage in Solidity 0.8.4

The StandardToken.sol contract uses `pragma solidity =0.8.4`, which includes built-in arithmetic overflow and underflow checks, making the use of OpenZeppelin's SafeMath library redundant for operations like add and sub. The contract employs SafeMath for arithmetic operations in functions such as `_transfer`, `_mint`, `_burn`, `_approve`, `increaseAllowance`, and `decreaseAllowance`. While this does not introduce vulnerabilities, it unnecessarily increases gas costs due to the additional function calls and checks provided by SafeMath, which duplicate Solidity 0.8.4's native overflow protection.

Remove the SafeMath library and its usage (using SafeMath for uint256) from the contract. Replace SafeMath operations (e.g., add, sub) with native Solidity arithmetic operators (+, -) to leverage the compiler's built-in overflow checks. This will reduce gas costs while maintaining the same level of safety.

Recommendation:

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. The risk can be prevented by temporarily locking the contract or renouncing ownership.

CONCLUSION AND ANALYSIS

Smart Contracts within the scope were manually reviewed and analyzed with static tools.

Audit report overview contains all found security vulnerabilities and other issues in the reviewed code.

Found no HIGH issues during the first review.

TOKEN DETAILS

Details

JAMI TOKEN ANALYTICS & TOP 10 TOKEN HOLDERS

The top 10 holders collectively own 100.00% (2,000,000.00 Tokens) of JamFi

Token Total Supply: 2,000,000.00 Token | Total Token Holders: 2

JamFi Top 10 Token Holders

Source: Etherscan.io

(A total of 2,000,000.00 tokens held by the top 10 accounts from the total supply of 2,000,000.00 token)

Rank	Address	Quantity (Token)	Percentage
1	0x4Ab8DF5A...3D5D29a69	1,920,000	96.0000%
2	0xBaE38615...0E75e00D7	80,000	4.0000%

TECHNICAL DISCLAIMER

Smart contracts are deployed and executed on the blockchain platform. The platform, its programming language, and other software related to the smart contract can have its vulnerabilities that can lead to hacks. The audit can't guarantee the explicit security of the audited project / smart contract.
