

SMART CONTRACT CODE REVIEW AND SECURITY ANALYSIS REPORT

Kitty City Blast

TOKEN OVERVIEW

Fees

• Buy fees: 3%

• Sell fees: 3%

Fees privileges

Can change fees up to 10%

Ownership

• Owned

Minting

No mint function

Max Tx Amount / Max Wallet Amount

· Can't change max tx amount and / or max wallet amount

Blacklist

Blacklist function not detected

Other privileges

- · Can exclude/include wallet from fees
- Contract owner has to call openTrade function to enable trade

FreshCoins Team will take no payment for manipulating the results of this audit.

The score and the result will stay on this project page information on our website https://freshcoins.io

FreshCoins Team does not guarantees that a project will not sell off team supply, or any other scam strategy (RUG or Honeypot etc)

INTRODUCTION

FreshCoins (Consultant) was contracted by
Kitty City Blast (Customer) to conduct a Smart Contract Code Review and
Security Analysis.

0xEF08Fd6970f8B3B8d0bbEEfcA70FfE34cFA93123

Network: Binance Smart Chain (BSC)

This report presents the findings of the security assessment of Customer's smart contract and its code review conducted on 14/12/2024

AUDIT OVERVIEW

Static Scan Automatic scanning for common vulnerabilities

ERC Scan
Automatic checks for ERC's conformance

- 1 High
- 1 Medium
- O Low
- Optimizations
- o Informational

No.	Issue description	Checking Status
1	Compiler Errors / Warnings	Passed
2	Reentrancy and Cross-function	Passed
3	Front running	Low
4	Timestamp dependence	Passed
5	Integer Overflow and Underflow	Passed
6	Reverted DoS	Passed
7	DoS with block gas limit	Passed
8	Methods execution permissions	Passed
9	Exchange rate impact	Passed
10	Malicious Event	Passed
11	Scoping and Declarations	Passed
12	Uninitialized storage pointers	Passed
13	Design Logic	Passed
14	Safe Zeppelin module	Passed

OWNER PRIVILEGES

- Contract owner can't mint tokens after initial contract deploy
- Contract owner can't exclude an address from transactions
- Contract owner can exclude/include wallet from tax

```
function setExcludedFromFees(address account, bool excluded) external onlyOwner {
    require(account != address(0), "Invalid address");
    _isExcludedFromFees[account] = excluded;
    emit UpdateExcludeFromFees(account, excluded);
}
```

Contract owner can include whitelist wallet

```
function addWhitelist(address account) external onlyOwner {
    whitelist[account] = true;
}
```

Contract owner has to call openTrade function to enable trade

Please note that owner wallet retains the ability to engage in trading, even in situations where trading is disabled

Contract owner can renounce ownership

```
function renounceOwnership() public virtual onlyOwner {
    _transferOwnership(address(0));
}
```

Contract owner can change taxFeeWallet and presaleWallet addresses

Current values:

```
function setTaxFeeWallet(address _taxFeeWallet) external onlyOwner {
    require(_taxFeeWallet != address(0), "TaxFeeWallet cannot be zero address");
    taxFeeWallet = _taxFeeWallet;
    emit UpdateTaxFeeWallet(_taxFeeWallet);
}

function setPresaleWallet(address _presaleWallet) external onlyOwner {
    presaleWallet = _presaleWallet;
}
```

 Contract owner can set the value of whitelistTime, which is a time period after the tradeOpeningTime during which specific restrictions apply to transfers for non-whitelisted addresses (max 10 minutes)

```
function setWhitelistTime(uint256 _whitelistTime) external onlyOwner {
    require(_whitelistTime <= 600, "Whitelist time cannot exceed 10 minutes");
    whitelistTime = _whitelistTime;
}</pre>
```

Contract owner can set fees up to 10%

```
function setMarketingTax(uint256 newMarketingTax) external onlyOwner {
    require(newMarketingTax <= denominator/10, "Tax cannot exceed 10%");
    marketingTaxBuy = newMarketingTax;
    marketingTaxSell = newMarketingTax;
    emit UpdateBuyFees(newMarketingTax);
    emit UpdateSellFees(newMarketingTax);
}</pre>
```

Contract owner can transfer ownership

```
function transferOwnership(address newOwner) public virtual onlyOwner {
    require(
        newOwner != address(0),
        "Ownable: new owner is the zero address"
    );
    _transferOwnership(newOwner);
}

function _transferOwnership(address newOwner) internal virtual {
    address oldOwner = _owner;
    _owner = newOwner;
    emit OwnershipTransferred(oldOwner, newOwner);
}
```

Recommendation:

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. The risk can be prevented by temporarily locking the contract or renouncing ownership.

CONCLUSION AND ANALYSIS

Smart Contracts within the scope were manually reviewed and analyzed with static tools.

Audit report overview contains all found security vulnerabilities and other issues in the reviewed code.

Found 1 HIGH issues during the first review.

TOKEN DETAILS

Details

Buy fees: 3%

Sell fees: 3%

Max TX: N/A

Max Sell: N/A

Honeypot Risk

Ownership: Owned

Blacklist: Not detected

Modify Max TX: Not detected

Modify Max Sell: Not detected

Disable Trading: Not detected

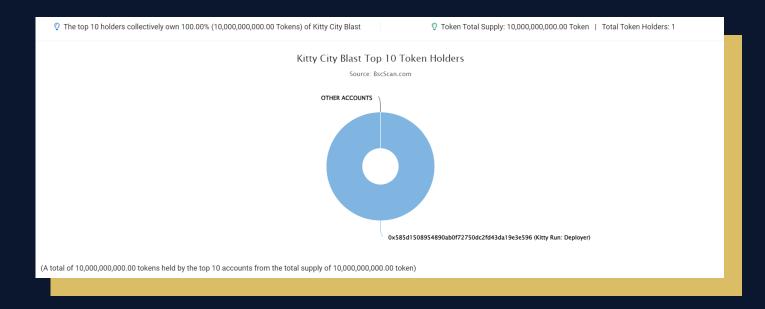

Rug Pull Risk

Liquidity: N/A

Holders: 100% unlocked tokens

KTB TOKEN ANALYTICS & TOP 10 TOKEN HOLDERS

	1	Kitty Run: Deployer 🗓	10,000,000,000	100.0000%

TECHNICAL DISCLAIMER

Smart contracts are deployed and executed on the blockchain platform. The platform, its programming language, and other software related to the smart contract can have its vulnerabilities that can lead to hacks. The audit can't guarantee the explicit security of the audited project / smart contract.
